MongoDB Compass, VSCode

SOFT SKILLS

- Strong communication and teamwork abilities, collaborating effectively with clients and internal teams
- Detail-oriented and meticulous, ensuring thorough testing and high-quality deliverables
- Adaptable and open to feedback, committed to continuous improvement

About Me

I'm committed to advancing my career in the Backend Developer field, focusing on improving my programming abilities and system design expertise to deliver efficient, business-oriented solutions. Additionally, I am currently developing my Frontend skills in preparation for transitioning into a Fullstack Developer role. I am highly motivated to continuously learn new technologies, adapt to changes, and grow alongside the organization.

WORK EXPERIENCE

Jan 2022 – present (3Y+)

Backend developer

Orisma technology

- Designed and developed RESTful APIs to integrate websites and applications based on Figma design specifications.
- Defined database schema and created comprehensive Data Dictionaries documenting field definitions and relationships.
- Implemented JWT authentication, input validation, and structured error handling for secure and reliable API operations.
- Wrote optimized SQL queries for data insertion, updating, and deletion.
- Prepared API documentation and Postman collections to support testing and security reviews.
- Developed key APIs including login/logout, member registration, two-factor authentication (2FA), email sending with templated HTML/CSS, file management with Amazon S3, and CMS module management.
- Automated scheduled tasks with cron jobs, such as daily data fetching and migration processes.
- Managed version control with Git (Sourcetree and CLI) and deployed updates via FileZilla, monitoring system logs for stability.
